Immunogen: A synthetic phospho-peptide corresponding to residues surrounding Ser32 of human phospho c-Fos

Description: c-FOS belongs to the Fos family of nuclear oncogenes which include Fos B, Fos-related antigen 1 (FRA1), Fos-related antigen 2 (FRA2) in addition to c-Fos(1). Activator Protein-1 (AP-1) is formed upon dimerization of Fos proteins with Jun protiens (c-Jun, Jun B, and JunD)(2,3). AP-1 is considered a transcription factor that binds to TRE/AP-1 elements and activates transcription. ERK5 is involved with c-Fos phosphorylation at Ser32 and Thr232 which increase c-Fos stability and its nuclear translocation.
