Phospho-MARCKS (Ser167/170) (C9) rabbit mAb APC conjugate

www.abwizbio.com Support: info@abwizbio.com

Order: sales@abwizbio.com

#2449 Store at: 2-8°C

For Research Use Only. Not For Use In Diagnostic Procedures.

Applications	Detection	Clonality	Isotype
Flow Cytometry	N/A	Monoclonal	Rabbit IgGk

Format: APC

Cross Reactivity: Predicted to work with mouse, rat and other homologues.

Formulation: 1X PBS, 0.09% NaN3, 0.2% BSA

Preparation: Protein A+G

Reactivity: Human, Mouse, Rat

Recommended

Usage: For flow cytometric staining, the suggested use of this reagent is 5 μ L per million cells or 5 μ L per 100

µL of staining volume. It is recommended that the reagent be titrated for optimal performance for each

application. See product image legends for additional information.

Immunogen: A synthetic phospho-peptide corresponding to residues surrounding Ser167/170 of human phospho

MARCKS

Description: MARCKS (myristoylated alanine-rich C kinase substrate) is a major PKC substrate expressed in all

eukaryotic cells(1,2). It binds to and cross-links actin filaments to serve as a bridge between Ca2+/calmodulin and PKC signaling and attenuates phosphatidylinositol 4,5-bisphosphate plasma membrane signaling (3). MARCKS is involved with cell mobility, phagocytosis, membrane traffic, cell adhesion, and mitogenesis. Ser159, 163, 167 and 170 of MARCKS are phosphorylated by PKC in response to cell groeth and cellular stress (4). MARCKs phosphorylation is believe to induce its

tranlocation from plasma membrane to cytoplasm.
